Subject: Residential Sampling report

Todd, as a follow-up to our conversation yesterday. Mark indicated that Thursday of next week at 10am would probably be the time for us to meet with the contractor. The purpose is to finalize our sampling, see the property specific grid locations, and coordinate our access agreements. I will coordinate the time and call number when known.

Mark, it would be useful to have the property grid maps and a summary outline of the sampling prior to our meeting. Is this possible? This would provide us with an early review and a more focused discussion for Thursday.

To summarize:

1. There are nine properties listed for sampling. 2 granted access (b) (6) 1 indicated it is in the mail (b) (6) 2 accepted copies with the expectation to review (b) (6) and 4 others have been contacted either by phone or email (b) (6)
2. One additional property is listed as a possibility (b) (6)
3. Grids will be determined based on the size of the property being sampled. The contractor will provide draft property grids for the team to review prior to sampling.
4. Sampling will be done in each grid for metals (sieved (only for 0-2in and 2-6in) and unsieved), SVOC, VOC, pesticides, and arochlor.
5. Sample depths will include 0-2in; 2-6in; 6-12in; and 12-24 in.
6. In areas of interest, deeper cores will be taken for visual logging. Tank area near (b) (6) property, and potentially (b) (6) property.
